

# Commercial Lights

## Solar Real Estate Lighting

If you handle, manage, or represent any commercial properties for sale or development, it is likely that you have a number of signs which are too large to be illuminated with the standard SunPal Series of Solar Real Estate Sign Lights. While a number of SunPals, SunPal 4Xs, or SunPal 2Xs working together may create the amount of light you are in need of, it is simply more cost effective and attractive to go with a larger, more powerful solar light designed for larger signage applications.

Silicon Solar Designs, manufactures, and distributes a number of larger solar sign lights for commercial applications. Whether your sign is merely a few feet tall and wide, or a full-sized billboard for outdoor advertising, we carry a solar sign light just for you.

Each of these lights are stand-alone all inclusive kits that feature solar panels for charging, batteries for power storage, operation, and overcast protection, and light fixtures to disperse (or focus) the light exactly where you need it to be.

Look below at some of the Commercial Solar Sign Lights that Silicon Solar offers, call our sales team, and learn how these unique solar solutions can add profitability to your business and add extra cashflow to your bottom line by cutting your monthly and annual operating costs.

### **EnviroLight Series** *Solar Billboard Lighting*

These unique lighting kits are designed to provide standalone lighting for billboards and other large outdoor advertising. With packages covering small, single sided billboards up to 30ft wide all the way to double and triple sided billboards up to 60ft in length and more.

### **GenLight Series** *Large Commercial Solar Sign Lighting*

The GenLight and the GenLight Plus are our two Solar Sign Lights for large commercial signs. The GenLight Plus will fully illuminate signs up to 8' x 12' in size, while the GenLight is perfect for lighting signage up to about 6' x 8'. Both the GenLight and the GenLight Plus come with battery backups for overcast protection that lasts between 3 and 5 days.

### **TechLight Series** *Commercial Solar Sign Lighting*

The TechLight Plus and the TechLight Plus 2X are our smallest, and most affordable commercial solar sign lights. These affordable are great for small commercial signage in the 4' to 6' range, feature all night running times, fast charging solar panels, and enough battery backup to survive several days without solar charging.

**The 7 Values: Security - Convenience - Peace of Mind - Economy - Save Time - Reliability - Save Money**
